

Resin Flooring

St. David's Centre, Islington

The existing St. David's Church was to be totally refurbished internally. On completion the new facilities will include; a refurbished worship space, a youth centre in the new crypt, a café and community-focused activities space and working area for local charities.

The main contractor HOC UK appointed Larsen Contracts as specialist contractor to install epoxy resin flooring to an area of 464m².

The existing floor was mechanically prepared by diamond grinding with primer applied to substrate using FAS 100 Remmers Inducolor PUR 2mm SL was applied with 2 seal coats of PUR Top M plus applied by Nylon Rollers. Inducolor PUR is a tough, smooth and flexible suitable for floors subject to heavy traffic. The attractive finish was achieved with fast installation which was of great benefit to the main contractor who was working to tight programme. There was also an area of 40m² of Chipboard floor which required additional preparation prior to application of coating including primer, affix rubber crumb underlay and a grouting coat .

Project Details:
