

MacDonagh Junction – Antislip System

Larsen Contracts has successfully installed the Degafloor FB system at MacDonagh Junction Shopping Centre located in Co. Kilkenny. Out-of-hours installation was carried out to the previously tiled entrance areas of this busy shopping centre from the multi-storey car park.

The application specified was a Degafloor FB system with a sand-scattered antislip finish. The system has a two hour curing time once the sealing coat has been laid - which ensured the entrances were fully functional by opening time. This system offers excellent durability which fitted in perfectly due to the high volume of foot traffic in these areas. It comes with a unique chemical bonding between all three layers as well as with a ten-year manufacturer's warranty when the maintenance regime is adhered to.

Before work commenced, pedestrian areas were cordoned off, doorways to the main shopping centre were sealed and glass panels were protected. The application of the system involved grinding the existing tiled surfaces, paying close attention to the installed ground lighting. A primer coat was laid, followed by the body coat with a light khaki coloured sand which was lightly scattered on top. Once the body coat had cured and the excess sand was removed, the final sealing coat was laid and the whole system was fully cured and ready for the shopping centre opening each morning.

Project Details:

Location: MacDonagh Junction, Co. Kilkenny

Client: MacDonagh Junction S.C

Application:

- Degafloor 112 (Primer)
- Degafloor 419 (Body Coat)
- Degafloor 529 (Seal Coat)

Market: Retail & Car Parks
