

Resin Flooring – Magellan Aero

Larsen Contracts were appointed to prepare and install the Remmers PH flooring system together with over 1200Lm of line marking in Magellan Aero during the 2016 Christmas shutdown period. This large 1600m² area required the floor to be mechanically prepared with extreme dust control systems in place due to the sensitive equipment in use in this busy factory. Magellan designs, engineers and manufactures aeroengine and aerostructure assemblies and components for aerospace markets, advanced products for military and space markets, industrial power generation, and specialty products

Two coats of the oyster grey Remmers PH System were laid achieving an almost seamless floor. Aluminium oxide was selected and mixed with the second coat to achieve the desired anti-slip. After carefully marking out areas, the blue PH system was installed the following day using the same anti-slip finish. The floors were reintroduced into service on time to meet production demands to our customer's satisfaction.

Project Details:

Location: Newtownards, Co. Down

Client: Magellan Aero

Main Contractor: Larsen Contracts

Application:

- Remmers ST 100 primer
- Remmers PH System & Aluminium Oxide

Market: Aviation, Engineering
